

TO THE PARENTS OF CHILDREN IN GRADE 4

Dear parents,

The Quebec immunization program includes the administration of several vaccines free of charge for school children in Grade 4.

The following vaccines will be offered to your child during this school year:

- 1 dose of the hepatitis A vaccine
- 1 dose of the human papillomavirus (HPV) vaccine

This vaccine is more effective when administered during childhood, before any contact with the virus.

A single dose of these vaccines is sufficient to protect your child well.

Protection lasts for several years, or even a lifetime.

Consult the attached documentation to learn more about the vaccines recommended during Grade 4 as well as the diseases they prevent.

This information will help you make an informed choice for your child.

You may also consult the NRBHSS Web site by scanning the following QR code:

AUTHORIZATION FORMS

Attached you will find an authorization form for vaccination against hepatitis A and HPV. The authorization form must be completed and returned.

It is very important to fill out all the sections of the form, even if you refuse to have your child vaccinated or if they have already received one of the vaccines.

If you have any concerns or questions, contact your CLSC/nursing station.

We thank you for your cooperation,

The CLSC nursing team
